

Innovation for solving tomorrow's challenges

Dissemination Brief

Over the years, AcrossLimits has built up a vast skill set that gives any consortium an advantage in having us as a partner. One of our main strengths is leading Dissemination and Communication work packages.

Leveraging our strong networks, both on national and international levels, we have been dissemination leaders in various EU funded projects where our tasks ranged from simple information dissemination, to the creation of websites and the hosting of international conferences and symposia.

About Us

AcrossLimits is a Maltese registered SME, founded in 2001. Over the last two decades, the company has acquired a wealth of knowledge and experience in various European Union programmes, by participating in over 70 EU-funded projects.

Apart from having an impeccable track record with the European Commission's various institutions, AcrossLimits' network of over 50 international experts from various industries gives any consortium an added advantage by having us as a partner.

AcrossLimits offers courses under the brand name TrainingMalta™, an MFHEA and ISO accredited training centre in operation since 2002, offering a rich learning experience made up of theoretical and hands-on tasks in various sectors such as eLearning, Entrepreneurship, Digital Storytelling, Leadership Skills and ISO.

The Team

AcrossLimits operates as a remote company with highly-skilled team members across Europe and a physical office in Malta – but has representation offices in collaboration with business partners in Finland, France, Greece, Hungary, North Macedonia, Spain, Switzerland, UAE and UK. AcrossLimits also engages a pool of 50+ experts from around the world in specific sectors to ensure the highest of standards.

Team Sectors

- Our Experts participate in national, EU and international committees and use their technical expertise to advise on policy development.
- Our Project Managers have years of experience in areas such as entrepreneurship, the environment, IT, gender and youth work, education, digital services, infrastructure, eHealth and more.
- Our Technical team develops software concepts, tools, online learning platforms, commercial websites, and virtual hubs including gamification and interactive experience.
- Our Marketing team produces various content and designs visual communication material for different channels. The team also disseminates project information across an assortment of platforms.

Networking

When it comes to networking, we are firm believers in creating alliances and building connections. This is a practice which will strengthen your business as well as the status of your project. At AcrossLimits we have built an extensive network of contacts due to having worked for over 20 years in European affairs. We can therefore connect you with the contact you need; including universities, research centres, business organisations, NGOs and other EU Public entities.

Dissemination

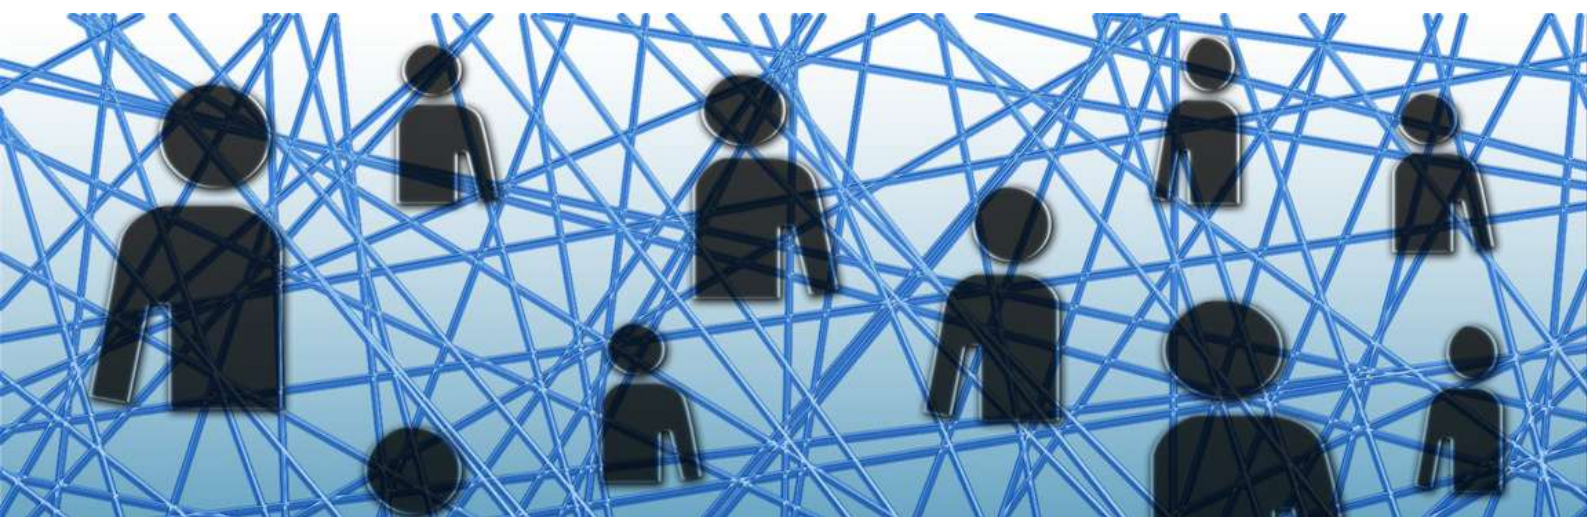

Over the years, AcrossLimits has built up a vast skill set that gives any consortium an advantage in having it as a partner. One of our main strengths is leading Dissemination and Communication work packages. Leveraging on our strong networks, both on national and international levels, we have been Dissemination Leaders in various EU funded projects whereby our tasks ranged from simple creation of websites to hosting of international conferences and symposia.

Sustainability

The skills of many research consortia focus on making discoveries and testing results, not carrying out sustainable activities. It takes a completely different outlook to monetise research; to speak to industry experts, build a business proposition and find the right clients. These are areas in which we excel.

Our work does not stop when a project ends. We can help you transfer the knowledge acquired through your research, sustain it and commercialise it, and even create a spinoff from it.

Our vision has served us well not just for our own projects, but also for those of others. Our connections are found all over Europe; from institutions, researchers and regulators to economists, entrepreneurs and industrialists. We, therefore, possess a multi-faceted approach to carrying out our services. You are safe with us by your side! Keep doing what you are best at, and we will take care of the rest.

Services

Dissemination related activities

- 
 Organisation of conferences/ seminars/workshops/symposia.

- 
 Development and maintenance of interactive project websites including counters related to project-defined KPIs.

- 
 Outreach in many European countries via AcrossLimits' network of contacts.

- 
 Development and deployment of marketing plans.

- 
 Development of communication material including:
 - Working document templates
 - Newsletters
 - Brochures
 - Flyers
 - Social media posts
 - Press releases

Projects

ENVISION

EmpoweriNg (European) SME business model InnovatiON

This was an EU funded project under the framework programme Horizon2020 aimed at providing tools to SMEs to improve and transform their business models using innovation. The project built the tools, encouraged SMEs to use them and studied the impact it had on them. In order to reach its final aim to boost European competitiveness and job creation, ENVISION SMEs across Europe could re-think and transform their business models with the help of an easy-to-use, open-access, self-service web platform.

envisionproject.eu

ENVISION

Our Role

AcrossLimits were the leaders in charge of work package 6–Outreach. To target the maximum number of SME’s in Europe, Acrosslimits was signing MOU’s with multiplier organisations like Chambers of Commerce and business incubators / accelerators. We managed to reach over 2000 SMEs, Chambers of Commerce and multiplier organisations by the end of the project. Business Acceleration services included helping SMEs innovate their business model, improve their sales prospects, make their internal processes more efficient and streamlined and ensure business growth.

Projects

MARS

Methodological Approach for Real Social Effects in Adult Education (MARS)

This project wants to help reduce the contradictory emotional states such as violence, anger, despair and panic experienced by individuals in crisis. The project aims to help these individuals contribute to produce different competencies and to improve their literacy skills in terms of digital, health, information and economy by creating adult education modules that intend to guide adult educators and good practices for LTT activities.

The target audiences of the project are adults and stakeholder participants gathered in 3 groups with a positive ambience to contribute to the project:

1. Trainers, trainees and institution managers working in adult education centres where pilot applications will be carried out;
2. Adult education institutions, non-governmental organisations, associations, institutions volunteering with adult audiences, decision-makers, local governments and press organs.
3. All kinds of institutions and adults who will benefit from the project's results.

marsproject.eu

Our Role

AcrossLimits was tasked with designing and creating the project's e-learning platform.

This platform includes information resources comprised of 12 training modules for individuals to assist them in recognising the de facto rules within their personal, regional, national, and international contexts, raising awareness, and acquiring the necessary behavioural skills in the crisis management process. The platform plays an important role in educators' professional and personal development, as well as in expanding their academic knowledge and benefiting their trainees and themselves through the training they will provide in this field.

Projects

H-CLOUD

HORIZON CLOUD gathers European Cloud Computing stakeholders in a sustainable, informed, and coordinated open community to remove fragmentation and increase collaboration in Europe and beyond

HORIZON CLOUD is a European Commission initiative that aims to consolidate and grow the Cloud Computing research and innovation community in Europe. To achieve this ambition, HORIZON CLOUD brings together innovators, policymakers, Cloud Computing researchers, industry players, and users into an open, participatory, and sustainable forum.

The HORIZON CLOUD Forum strengthens collaboration to address challenges and opportunities at research, technological, policy, standardisation and organisational level to unlock the potential of Cloud Computing for all European stakeholders.

HORIZON CLOUD provides a rich set of collaborative content, tools and actions to overcome fragmentation and increase collaboration in Europe and beyond, while aligning on a common direction to help creating a Cloud agenda for the future of Europe.

h-cloud.eu

Our Role

AcrossLimits is leading the business development actions to sustain the exploitable assets that will be created in the H-CLOUD project. To achieve the sustainability of H-CLOUD assets, AcrossLimits will activate its European network of entrepreneurs, SMEs, business angels and business organisations in order to create an interest in supporting them through a number of mechanisms. We will also explore the possibility of providing value-added services to the core offer, such as training courses and specialised consultancy.

AcrossLimits is also the lead partner on Green ICT and sustainability within H-Cloud, leading the business development actions to sustain the exploitable assets that will be created in the H-CLOUD project, to ensure these assets become a viable and valuable legacy for the project. To achieve this objective AcrossLimits is engaging a wide variety of stakeholders across Europe, through its European network of entrepreneurs, SMEs, business angels and business organisations in order to create an interest in supporting the project and developing the appropriate mechanisms to enable this.

Client

Robotics4EU

Boosting wider adoption of Robotics in Europe

Robotics4EU is a 3-year-long project funded under the European Union's Horizon 2020 research and innovation programme, which aims to ensure more widespread adoption of (AI-based) robots in healthcare, inspection and maintenance of infrastructure, agri-food, and agile production.

Robotics4EU will create and empower the EU-wide responsible robotics community representing robotics innovators from companies and academia in the four application areas, as well as citizens / users and policy / decision-makers by:

- Raising awareness about non-technological aspects of robotics by organising community building and co-creation events bringing together the robotics community and citizens;
- Advocating for the responsible robotics among all stakeholders' groups;
- Developing a responsible robotics maturity assessment model and bringing the project results to the standardisation bodies.

robotics4eu.eu

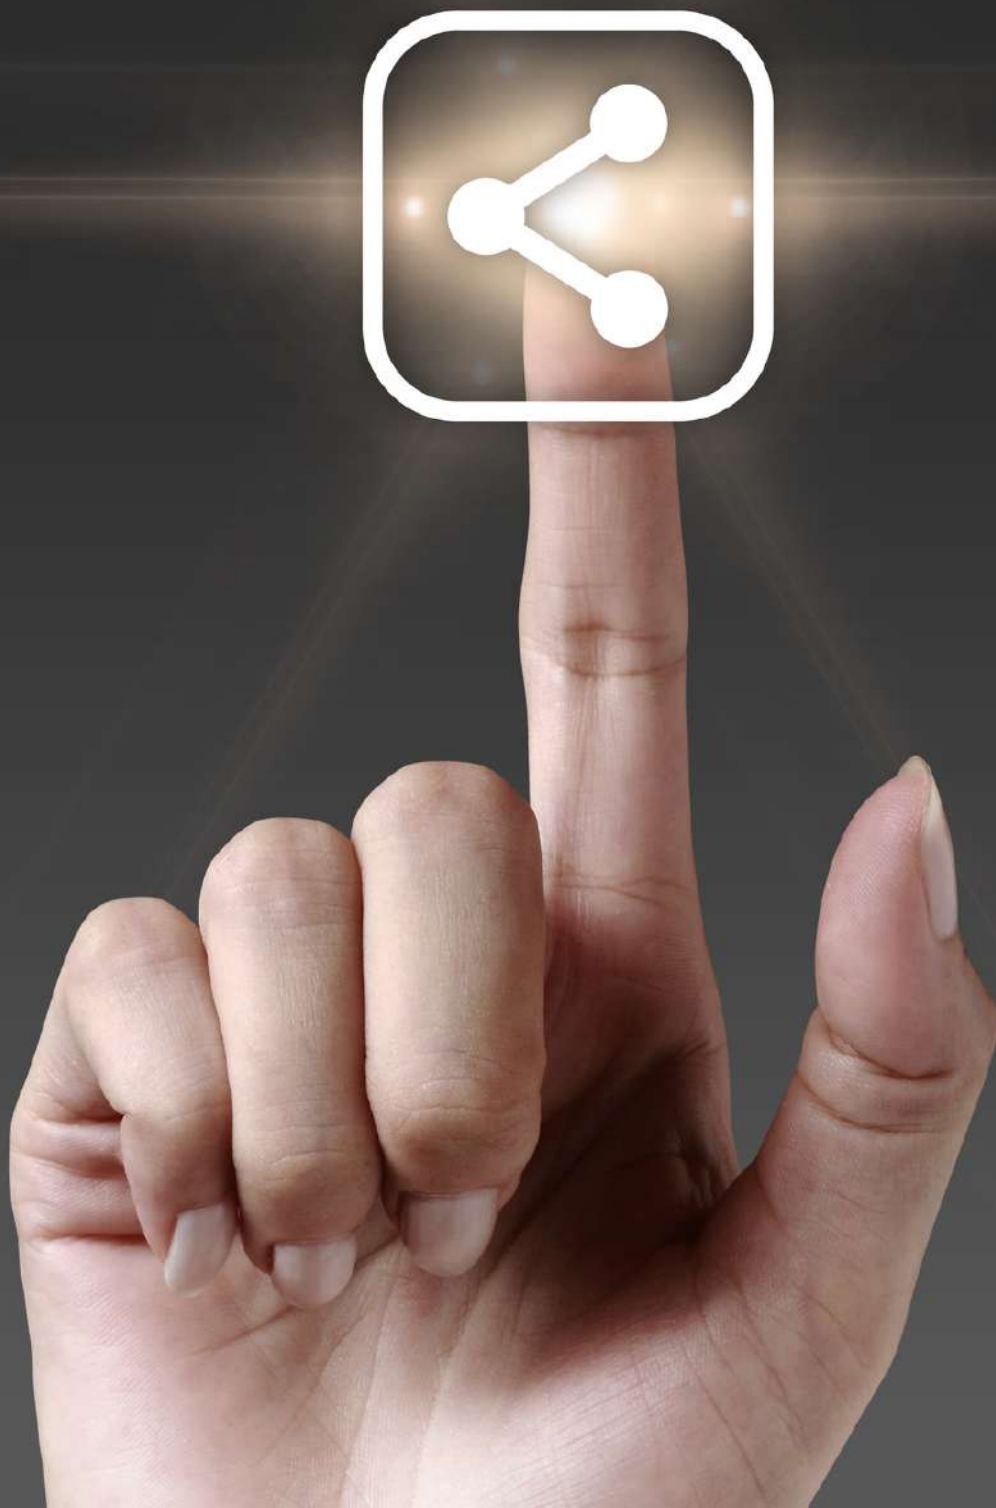

Our Role

AcrossLimits was tasked with recruiting participants in Malta to host a GlobalSay citizen discussion about the role of robotics in society.

Each GlobalSay partner had to recruit 10 hosts locally in their country. These were chosen based on a range of criteria intended to ensure the diversity of the hosts. Each meeting had a total of 5-8 participants, including the host. These were friends, family, colleagues, and acquaintances. The meeting took place anywhere the host wanted, using the GlobalSay platform, and lasted between 1-2 hours.

AcrossLimits recruited the hosts via social media outreach with custom visuals, a press release published in a local newspaper, word of mouth, and our network of contacts. Once recruited, AcrossLimits coordinated the hosts and their meetings, collected data and forwarded it to the project's organisers.
